Ms. Foster,

I spoke to Mr. Keith Talley, who oversees pipeline operations for Crosstex Energy. Mr. Talley stated that the 36" pipeline is shut in and there are no plans to resume transmission of product through that line. He stated that Crosstex Energy is in the planning stage of relocating the line, but the hurricane has slowed that process. Mr. Talley's phone number is (337) 962-1276 if you need any additional information from Crosstex Energy. If you need me to obtain additional information concerning the Bayou Corne NG Seep Incident, please contact me. I also left you a voice mail prior to sending this e-mail.

Thanks,

Louis Martin-ES III

This is the information my managers were asking about.

Crosstex to relocate pipeline near Bayou Corne sinkhole. Crosstex Energy L.P. will reroute its 36-inch natural gas pipeline located near the Bayou Corne sinkhole, a project that will cost \$20 million to \$25 million and take around a year to complete, according to the Dallas-based company.
